**Quick Specs**

**Dynasty 300 Multiprocess**, paired with an ArcReach® SuitCase® feeder, provides a superior solution for all portable applications.

With multiprocess capabilities and features like Auto-Line®, AC TIG, pulse and high-frequency arc starts, the Dynasty 300 Multiprocess is the most versatile, portable machine in its class.

**QuietPulse™**
Activate QuietPulse by selecting sine or triangular waveshape to reduce audible noise.

**Dynasty 300 Multiprocess**
- (907819) shown with ArcReach SuitCase 12 feeder (951729001).

Note: Dynasty 300 is not capable of ArcReach control.

**More Jobsite Productivity and Efficiency**
AC/DC CC/CV multiprocess equipment means always having the right equipment for the job. This also simplifies logistics and translates into less time locating and moving equipment and more time welding.

**Reduced Training Time**
Reduced training time by utilizing one piece of equipment, saving labor costs and helping to keep projects on schedule.

**Improved Jobsite Safety**
Portable welding equipment allows for easy movement of equipment to point of use. The chances of slip, trip or fall injuries are virtually eliminated because there is no need to travel through multi-story and cluttered jobsites, since the power source is point of use.

**Increased Uptime**
Low power draw can mean additional welding equipment on the same circuit, getting work done faster by reducing the chances of power outages from tripped breakers or blown fuses.

**More Operator Control**
Weld operators can quickly and easily adjust parameters, reducing the risk of operators trying to get by with less than ideal settings. Also, state-of-the-art TIG functions such as pulse, high-frequency starting, and AC (for aluminum) allow for optimization for virtually any material type.

Power source is warrantied for three years, parts and labor.
**Weld Process Features**

**AC TIG**

Balance control provides adjustable oxide removal which is essential for creating the highest quality aluminum welds. DX models provide extended ranges.

Frequency controls the width of the arc cone and can improve directional control of the arc.

**AC Waveforms**

- Advanced square provides a fast freezing puddle, deep penetration and fast travel speeds.
- Soft square for a soft buttery arc with maximum puddle control and good wetting action.
- Sine for customers that like a traditional arc. Quiet with good wetting.
- Triangular reduces the heat input and is good on thin aluminum. Fast travel speeds.

Independent amplitude/amperage control allows EP and EN amperages to be set independently to precisely control heat input to the work and electrode.

**DC TIG**

Exceptionally smooth and precise arc for welding exotic materials.

Pulse. Pulsing can increase puddle agitation, arc stability and travel speeds while reducing heat input and distortion.

**Pulse Waveforms**

- Square provides a fast freezing puddle for ultimate arc control.
- Sine produces a reduced audible sound and provides a more fluid puddle that is good for overlaying applications.
- Triangular provides a quick-forming puddle while further reducing heat for thin materials.

QuietPulse™: Activate QuietPulse by selecting sine or triangular waveshape to reduce audible noise.

### ArcReach® SuitCase® 8 and 12 (Note: Dynasty 300 models are not capable of ArcReach control.)

Voltage-sensing, portable feeders designed to run off of arc voltage from almost any welding power source, provide extreme reliability for construction and fabrication.

- Scaled wire pressure knob provides easy adjustment and consistent pressure on the drive rolls and wire
- Wire drive and motor assembly is specifically designed for mobile welding applications to provide smooth and consistent wire delivery
- Gun locking tab works with guns having corresponding locking grooves to prevent gun from being pulled out if the feeder is dragged by the gun
- Ultra-low drag inlet guide pins make loading the wire easy and do not deform the wire on the way into the drive rolls
